Subject Index of Vol. 143

- Advanced materials**
fracture toughness evaluation for advanced materials using chevron-notched compact specimens, 119
- Alloys**
cracking behaviour of heat-resisting steels, alloys and a carbon-fibre-reinforced polymer at elevated temperatures, 213
- Aluminium**
effects of microstructure on the mechanical properties and fracture of γ -base titanium aluminides, 51
- Barium**
deformation and fracture characteristics and its effect on the superconductivity of a high T_c superconductor ($\text{YBa}_2\text{Cu}_3\text{O}_{7-x}$), 241
- Carbon**
cracking behaviour of heat-resisting steels, alloys and a carbon-fibre-reinforced polymer at elevated temperatures, 213
effects of pressure carbonization in the C-C composites process, 223
- Ceramics**
dynamic fracture of ceramics and ceramic composites, 111
interface and strength in ceramic matrix composites, 103
strength evaluation method and design optimization for ceramic gas turbine blades, 11
strength evaluation of ceramic-metal joints, 91
the mechanical properties of reinforced ceramic, metal and intermetallic matrix composites, 63
- Composites**
analytical study on dimensional changes in thermally cycled metal matrix composites, 143
delamination failures in polymer composites, 167
dynamic fracture of ceramics and ceramic composites, 111
effects of pressure carbonization in the C-C composites process, 223
interface and strength in ceramic matrix composites, 103
the mechanical properties of reinforced ceramic, metal and intermetallic matrix composites, 63
- Copper**
deformation and fracture characteristics and its effect on the superconductivity of a high T_c superconductor ($\text{YBa}_2\text{Cu}_3\text{O}_{7-x}$), 241
- Corrosion**
some principal mechanisms in the simultaneous erosion and corrosion attack of metals at high temperatures, 197
- Cracking**
cracking behaviour of heat-resisting steels, alloys and a carbon-fibre-reinforced polymer at elevated temperatures, 213
- Cracks**
an analysis of the growth of small fatigue cracks, 127
cracks on bimaterial interfaces: elasticity and plasticity aspects, 77
the wedge mechanism of fatigue crack growth in silicon nitride, 135
- Damage assessment**
a case study and damage assessment of some heavy section components operating for more than 100 000 h in fossil-fired power plants, 231
- Deformation**
deformation and fracture characteristics and its effect on the superconductivity of a high T_c superconductor ($\text{YBa}_2\text{Cu}_3\text{O}_{7-x}$), 241
- Delamination**
delamination failures in polymer composites, 167
- Design optimization**
strength evaluation method and design optimization for ceramic gas turbine blades, 11
- Dimensional changes**
analytical study on dimensional changes in thermally cycled metal matrix composites, 143
- Elasticity**
cracks on bimaterial interfaces: elasticity and plasticity aspects, 77
- Electronic devices**
reliability evaluation of electronic devices, 247
- Elevated-temperature applications**
materials for evaluated-temperature applications, 43
- Environmental effects**
environmental effects during application of materials at temperatures above 1200 °C, 187
- Fatigue**
an analysis of the growth of small fatigue cracks, 127
the wedge mechanism of fatigue crack growth in silicon nitride, 135
- Fibre-reinforced plastics**
hygrothermal degradation and fracture process of advanced fibre-reinforced plastics, 155
- Fibres**
cracking behaviour of heat-resisting steels, alloys and a carbon-fibre-reinforced polymer at elevated temperatures, 213
- Fossil-fired power plants**
a case study and damage assessment of some heavy section components operating for more than 100 000 h in fossil-fired power plants, 231
- Fracture**
deformation and fracture characteristics and its effect on the superconductivity of a high T_c superconductor ($\text{YBa}_2\text{Cu}_3\text{O}_{7-x}$), 241
dynamic fracture of ceramics and ceramic composites, 111
effects of microstructure on the mechanical properties and fracture of γ -base titanium aluminides, 51
fracture toughness evaluation for advanced materials using chevron-notched compact specimens, 119

- hygrothermal degradation and fracture process of advanced fibre-reinforced plastics, 155
- Gas turbines
 - strength evaluation method and design optimization for ceramic gas turbine blades, 11
- Hygrothermal degradation
 - hygrothermal degradation and fracture process of advanced fibre-reinforced plastics, 155
- Interfaces
 - cracks on bimaterial interfaces: elasticity and plasticity aspects, 77
 - interface and strength in ceramic matrix composites, 103
- Joints
 - strength evaluation of ceramic-metal joints, 91
- Material design projects
 - state of the art of material design projects for severe service applications, 3
- Mechanical properties
 - effects of microstructure on the mechanical properties and the fracture of γ -base titanium aluminides, 51
 - the mechanical properties of reinforced ceramic, metal and intermetallic matrix composites, 63
- Metals
 - analytical study on dimensional changes in thermally cycled metal matrix composites, 143
 - overview of research on aerospace metallic structural materials, 31
 - strength evaluation of ceramic-metal joints, 91
 - the mechanical properties of reinforced ceramic, metal and intermetallic matrix composites, 63
- Microstructure
 - effects of microstructure on the mechanical properties and fracture of γ -base titanium aluminides, 51
- Multidirectional laminates
 - strength optimization of multidirectional laminates in an in-plane combined stress state, 175
- Nitrogen
 - the wedge mechanism of fatigue crack growth in silicon nitride, 135
- Plasticity
 - cracks on bimaterial interfaces: elasticity and plasticity aspects, 77
- Plastics
 - hygrothermal degradation and fracture process of advanced fibre-reinforced plastics, 155
- Polymers
 - cracking behaviour of heat-resisting steels, alloys and a carbon-fibre-reinforced polymer at elevated temperatures, 213
 - delamination failures in polymer composites, 167
- Pressure
 - effects of pressure carbonization in the C-C composites process, 223
- Reliability
 - reliability evaluation of electronic devices, 247
- Service applications
 - state of the art of material design projects for severe service applications, 3
- Silicon
 - the wedge mechanism of fatigue crack growth in silicon nitride, 135
- Simultaneous corrosion
 - some principal mechanisms in the simultaneous erosion and corrosion attack of metals at high temperatures, 197
- Simultaneous erosion
 - some principal mechanisms in the simultaneous erosion and corrosion attack of metals at high temperatures, 197
- Space propulsion
 - materials for advanced spaced propulsion systems, 21
- Steels
 - cracking behaviour of heat-resisting steels, alloys and a carbon-fibre-reinforced polymer at elevated temperatures, 213
- Strength evaluation
 - strength evaluation method and design optimization for ceramic gas turbine blades, 11
- Strength optimization
 - strength optimization of multidirectional laminates in an in-plane combined stress state, 175
- Stress
 - strength optimization of multidirectional laminates in an in-plane combined stress state, 175
- Structural materials
 - overview of research on aerospace metallic structural materials, 31
- Superconductors
 - deformation and fracture characteristics and its effect on the superconductivity of a high T_c superconductor ($\text{YBa}_2\text{Cu}_3\text{O}_{7-x}$), 241
- Thermally cycled metals
 - analytical study on dimensional changes in thermally cycled metal matrix composites, 143
- Titanium
 - effects of microstructure on the mechanical properties and fracture of γ -base titanium aluminides, 51
- Toughness
 - fracture toughness evaluation for advanced materials using chevron-notched compact specimens, 119
- Wedge mechanism
 - the wedge mechanism of fatigue crack growth in silicon nitride, 135
- Yttrium
 - deformation and fracture characteristics and its effect on the superconductivity of a high T_c superconductor ($\text{YBa}_2\text{Cu}_3\text{O}_{7-x}$), 241
